✓ LIQUID/AIR COOLING

✓ INTELLIGENT INTEGRATION

✓ PROTECTION IP54/IP55

✓ BATTERY /6000 CYCLES

Overview

In the Swiss Alps, a pilot project combining solar tracking systems and helical wind turbines achieved: "Our base stations now work like camels - storing energy when resources are plentiful and conserving it during lean periods," describes project manager Marco Fischer. In this study, the idle space of the base station's energy storage is used to stabilize the photovoltaic output, and a photovoltaic storage system microgrid of a 5G base station is. Beyond emergency backup, modern storage systems now deliver measurable economic, environmental, and grid-level. The one-stop energy storage system for communication base stations is specially designed for base station energy storage. Users can use the energy storage system to discharge during load peak periods and charge from the grid during low load periods, reducing peak load demand and saving electricity. A telecommunications company in Central Asia built a communication base station in a desert region far from the power grid. The cabinet houses critical components like main base station equipment, transmission equipment, power supply systems, and battery banks. Meanwhile, the pole serves as a mounting point for antennas, Remote Radio Units (RRUs), and.
