NEC 2026 and IEC 62548 FAQ What does. To chain multiple photovoltaic modules - like solar panels - in an array, you must connect them together and to your portable power station or other balance of system. You can do that one of two ways (or a hybrid of both). But which wiring configuration maximises your. Series connections are ideal for larger home solar systems (4kW+) and long distances to the inverter, but they're vulnerable to shading issues since one shaded panel affects the entire string. Parallel connections is optimal for smaller setups like RV and boat systems, offering excellent shade. When solar panels are connected in series they charge fast, and this increases their power wattage. Series Wiring - Increases total voltage while current stays the same; ideal for long cable runs and voltage-based inverter requirements.
