

# Calculation of horizontal moment of photovoltaic support

## Overview

---

Add point loads, UDLs, and applied moments to get shear force and bending moment diagrams instantly. Find max values and critical sections. Try it free! Click on beam to add loads. Scale. Flexible photovoltaic (PV) support systems have low stiffness, low damping, and may suffer from aerodynamic instability, especially fluttering, under wind loads. However, they exhibit low stiffness, light weight, and low damping, making them wind-sensitive and prone to wind-induced. Horizontal single-axis solar tracking systems with Astronomical tracking algorithm are commonly used in photovoltaic (PV) installations. However, different algorithms can increase the PV installation's performance without implementing new equipment or technologies. The equinox occurs when the plane of the Earth's equator passes the center of the sun. During the June Solstice the sun's circular path in Flagstaff is positioned North, above the horizon at 78.
