

Communication base station EMS relocation

Overview

A possible solution for such scenarios is through the use of mobile cellular base stations that can be quickly deployed in the disaster area. This Emergency Medical Services (EMS) Operations and Communications Resource Manual has been developed by the State of California Emergency Medical Services Authority (EMS Authority) as an operational manual to be available to all local EMS agencies. Given the limited. Base station radios are located in fixed positions, such as public safety answering points or dispatch centers, and tend to have the most powerful transmitters. The proposed system includes PS-LTE functionalities, mission-critical push-to-talk, proximity-based. Voice orders to EMS personnel via radio, telemetry, or cellular phones shall be given by or under the direction of the EMS System Medical Director (EMS MD) or designee, who shall be either an Emergency Communications Registered Nurse (ECRN) or physician. "The use of cellular telephones is permitted. The base station carried by the movable platform can react to changes in the network in real time, allowing more flexibility and introducing a new degree of freedom for the emergency communication network. In this work, we present a quantitative network performance comparison between a fixed base.
