

# Communication base station energy storage patent

## Overview

---

The invention discloses a 5G base station energy storage regulation and control method considering a base station communication load state, and belongs to the technical field of energy storage charging and discharging control. The base station energy saving method includes determining an energy saving mode; and performing signal processing. Although power consumption reductions for user equipment (UE) have been standardized for some time, until recently, there had been minimal efforts to reduce power consumption at the network level. The indoor unit includes a coolant storage tank (6), a water cooled heat exchanger (9), a first coolant circulation pump (7), a second coolant circulation pump. the invention is entitled "Energy storage system for communication base station and energy storage method" The priority of the Chinese Patent Application, the entire contents of which is incorporated herein by reference.

## Communication base station energy storage patent

---

### **BASE STATION ENERGY SAVING METHOD, BASE STATION**

The present application relates to the field of wireless communications, particularly a base station energy saving method, a base station, a terminal device, and a storage medium.

### **BASE STATION DISCONTINUOUS RECEPTION AND**

The communication module 890 may include one or more communication processors that are operable independently from the processor 820 (e.g., the AP) and supports a direct (e.g., wired)

### **What is Communication?**

What is Communication? At its foundation, Communication focuses on how people use messages to generate meanings within and across various contexts, and is the discipline that studies all forms,

### **Communication**

Communication is commonly defined as the transmission of information. Its precise definition is disputed and there are disagreements about whether unintentional or failed transmissions are included and
