

# Communication base station wind power lightning protection detection specification

## Overview

---

The protection of GSM and base station towers from lightning and overvoltage is provided by integrating external lightning systems, internal lightning systems, earthing, equipotential bonding and LV surge arrester protection techniques within the framework of IEC-62305 standard. 56 presents the techniques applied to a telecommunication radio base station in order to protect it against lightning discharges. The purpose of this Recommendation is to give guidance on the protection of miniature base stations against lightning surge, especially those which are in unexposed environments (to lightning) and The first level lightning arrester is used to discharge most of the lightning current, and subsequent. How to protect a UHV substation from a lightning strike?

The direct lightning strike protection is usually achieved using lightning rods or wires. The calculation of the protection range of lightning rods or wires for UHV substations and converter stations may be performed using the same method as. This standard provides design and testing requirements for bonding, grounding, shielding, electromagnetic interference (EMI), lightning protection, electrostatic discharge (ESD) protection, transient protection, and surge suppression for electrical and electronic ground systems (GS) to be used at. China Tower is a world-leading tower provider that builds, maintains, and operates site support infrastructure such as telecommunication towers, high-speed rail, subway systems, and large indoor distributed systems. As of June 2019, China Tower boasted a combined 1.
