

Depreciation period of solar power generation

Overview

The IRS allows businesses and individuals to depreciate the cost of their solar energy system over a set period. For solar projects, the IRS depreciation period typically follows the Modified Accelerated Cost Recovery System (MACRS). Under MACRS, solar systems qualify for a 5-year depreciation. A PV system must have commenced construction on or before December 31, 2019. The tax credit will decrease to 26% for systems commencing construction in 2020, 22% for systems commencing construction in 2021, and 10% for systems commencing construction in 2022 or thereafter. Any PV system placed in service after 2024 may be classified as 5-year property via the modified accelerated cost recovery system (MACRS) under Provision 13703 of the Inflation Reduction Act of 2022. This guide will walk you through the essential aspects of MACRS. The Modified Accelerated Cost Recovery System (MACRS), established in 1986, is a method of depreciation in which a business' investments in certain tangible property are recovered, for tax purposes, over a specified time period through annual deductions.
