

# **Distributed solar power generation price**

## Overview

---

The median system price of large-scale, utility-owned PV systems in 2024 was \$1.65/Wdc in the second half of 2024. Module spot prices rose 2% in Q1 2025 and remained. These prices represent the up-front price paid by the customer for stand-alone PV systems, prior to receipt of any incentives, including any loan-financing fees bundled into the prices charged by installers, and are adjusted for inflation using the U. Bureau of Labor Statistics' "Consumer Price. Since peaking in August, prices for solar modules for distributed generation (DG) projects such as rooftop, commercial, industrial, and community solar in the United States have declined by 7.3%, said a Q4 report from procurement platform provider Anza Renewables. Driving this exponential growth is the dramatic decrease in the. NLR's Distribution Grid Integration Unit Cost Database contains unit cost information for different components that may be used to integrate distributed solar photovoltaics (PV) onto distribution systems. The database is focused on hardware and software costs and contains more than 335 data points.
