

District wind blade power generation

Overview

Wind turbines use blades to collect the wind's kinetic energy. Wind flows over the blades creating lift (similar to the effect on airplane wings), which causes the blades to turn. The blades are connected to a drive shaft that turns an electric generator, which produces (generates). Wind energy, an integral part of California's electricity portfolio, is needed to help meet the state's Renewables Portfolio Standard, which requires utilities to procure 60 percent of retail sales from renewable sources by 2030. Wind projects extend from Imperial County in the south to Shasta. The Solano 4 Wind project includes replacing some existing wind turbines with up to 19 new modern turbines. This will generate 85 megawatts (MW) of renewable energy to deliver to the electric grid. 3 million California households. manufacturing facilities specializing in wind components such as blades, towers, and generators, as well as turbine assembly across the country.
