

Dual-axis photovoltaic bracket effect drawing

Overview

This is the design for dual-axis solar tracking. Abstract: A dual-axis solar tracking system with a novel and simple structure was designed and constructed, as documented in this paper. A design process model consisting of the three main phases; planning, functional analysis, and design evaluation, was used. The planning phase involved the generation of design requirements. The CAD files and renderings posted to this website are created, uploaded and managed by third-party community members. This content and associated text is in no way sponsored by or affiliated with any company, organization, or real-world good that it may purport to portray.
