

# Energy storage lithium battery BMS process

## Overview

---

A battery management system (BMS) is the electronic brain inside every lithium battery pack. It monitors cell voltage, current, and temperature in real time. Unlike a single battery cell, which is relatively simple to manage, modern battery systems (especially lithium-ion battery packs used in EVs). The rapid growth of electric vehicles and energy storage systems has made the Battery Management System (BMS) one of the most critical technologies in modern battery packs. Often described as the "brain" of the battery," a BMS does far more than simple monitoring.
