Understanding NFPA 855: Fire Protection for Energy

As energy storage systems become increasingly integral to the energy grid, it's essential that fire safety remains a top priority. NFPA 855

As its name implies - "aspirated" smoke and off-gas detection systems use an "aspirator" mounted in a detector unit. The detector connects to a sample pipe network mounted within the area or object being protected. Using the suction from the aspirator, air is continuously sampled and transported to the detection chamber for analysis for particles
