[Residential Energy Storage Systems & Home Solar Battery Solutions](#)

Our floor mounted solar batteries are perfect for homeowners looking to store electricity at home, ensuring a steady, renewable energy supply throughout the day and night. These systems can also

'Floor' and 'ceiling' functions

Is there a convenient way to typeset the floor or ceiling of a number, without needing to separately code the left and right parts? For example, is there some way to do $\lceil x \rceil$ instead of

Formula for the floor function

The most natural way to specify the usual principal branch of the arctangent function basically uses the idea of the floor function anyway, so your formula "for" the floor function is correct

macros

Use `\xintFloor` command from the `xintfrac` package. It is completely expandable, hence can even go in an `\edef` or other contexts needing expandability. It natively accepts fractions such as $1000/333$ as

Adjusting the height of math floor symbol

The height of the floor symbol is inconsistent, it is smaller when the fraction contains a lowercase letter in the numerator and larger when the fraction contains numbers or uppercase letters
