

# Full-disk flow battery

## Overview

---

Flow batteries are notable for their scalability and long-duration energy storage capabilities, making them ideal for stationary applications that demand consistent and reliable power. Their unique design, which separates energy storage from power generation, provides flexibility. □Flow batteries are electrochemical cells, in which the reacting substances are stored in electrolyte solutions external to the battery cell □Electrolytes are pumped through the cells □Electrolytes flow across the electrodes □Reactions occur at the electrodes □Electrodes do not undergo a physical change. Self-charging batteries, which integrate energy conversion and storage within a single system, represent a promising technology for building a reliable and intelligent energy network. Their unique design, which separates energy storage from power generation, provides flexibility and durability. A Swiss firm is constructing what it claims is the world's most powerful redox-flow battery, designed to store vast amounts of renewable energy and help stabilise both the Swiss and European power grids. The FlexBase group is currently excavating a 27-metre-deep pit - longer than two footballs. A flow battery is a rechargeable battery with energy from two liquid chemicals separated by a membrane. These chemicals, dissolved in liquids, flow through the battery in separate loops.
