std::future

The class template `std::future` provides a mechanism to access the result of asynchronous operations: An asynchronous operation (created via `std::async`, `std::packaged_task`,

std::future::wait_until

`wait_until` waits for a result to become available. It blocks until specified `timeout_time` has been reached or the result becomes available, whichever comes first. The return value indicates why

Standard library header (C++11)

```
future (const future &) = delete; ~future ();  
future & operator =(const future &) = delete;  
future & operator =(future &&) noexcept;  
shared_future share () noexcept; // retrieving the  
value
```

std::future::~~future

Releases any shared state. This means: If the current object holds the last reference to its shared state, the shared state is destroyed. The current object gives up its reference to its shared
