## Overview

String inverters convert DC power from "strings" of PV modules to AC and are designed to be modular and scalable. Solar panels naturally produce direct current (DC) electricity, but your home and the electrical grid use alternating current (AC). Central inverters. Ampt String Optimizers are DC/DC converters that are used in large-scale PV plants to lower the cost and improve performance of new systems, upgrade existing systems to produce more energy, enable low-cost DC-coupled solar+storage systems, and provide string-level data for improved O&M. Wide bandgap semiconductors like Silicon carbide (SiC) and Gallium nitride (GaN) allow to operate. There are three primary tiers of PV inverters: microinverters, string inverters, and central inverters. Since microinverters are not rated for utility-scale voltages, we will largely ignore them in this article. Nevertheless, the additional dc-dc.
