

How many amps does a 12v inverter require

Overview

Inverter size: A small 12V inverter with a power rating of 200 watts might draw around 17 amps, while a larger inverter with a power rating of 2000 watts might draw around 167 amps. This maximum amp draw will generally depend on 2 factors: The efficiency of your inverter. motors, compressors, starting current can be 3-7 times the rated current. A quick rule is to divide watts by 10 for 12V systems or 20 for 24V systems. The larger the inverter, the more amps it uses. Here's a useful list that can help. Your inverter might differ slightly, but the figures will be in this region: If you have a 1,000W 12V inverter, you can expect it to use between 88 and 105.
