

How much is the wind and solar complementarity of communication base stations in Hungary

Overview

Cellular base stations powered by renewable energy sources such as solar power have emerged as one of the promising solutions to these issues. This will provide a stable 24-hour uninterrupted power supply for the base stations. The rapid growth of mobile communication technology and the corresponding significant increase in the number of cellular base stations (BSs) have increased operational expenses (OPEX) for mobile operators, due to increased electricity prices and fossil fuel consumption. Is there complementarity between wind power photovoltaic and hydropower?
