

# How to hoist photovoltaic panels onto stairs

## Overview

---

To lift solar panels onto your roof, you can use a ladder railing system, a pulley system, a lifting bag, or even DIY lifting systems using a pulley. Carrying them up the ladder can also be done with products like the solar panel caddy, and all of these ideas will make this task that much easier. Whether you're a solar installer or a DIY enthusiast, this method will save you time. Preparing to mount your solar panels onto your roof is an essential part of ensuring the long-term durability and performance of your solar system. Delivered in a flat-pack kit, it's a cost-effective solution that reduces shipping costs while still providing the performance. The Fluke Module Lift™ is designed to safely and quickly transport a PV module to a roof, streamlining the installation process of solar panels.

## How to hoist photovoltaic panels onto stairs

---

### Solar Panel Ladder Lift

One way to do this is by using a solar panel ladder lift. This type of hoist is specifically designed to hold and transport solar panels to the roof while the climber remains safely on a ladder.
