Python: match/case by type of value

You can match directly against the type of v, but you need a value pattern to refer to the types to match, as a "dotless" name is a capture pattern that matches any value.

regexp

This MATLAB function returns the starting index of each substring of str that matches the character patterns specified by the regular expression.

[Regular expression to match characters at beginning of line only](#)

Regex symbol to match at beginning of a line: ^
Add the string you're searching for (CTR) to the regex like this: ^CTR Example: regex That should be enough! However, if you need to get the

[RegEx match open tags except XHTML self-contained tags](#)

The tag to match may end with a simple ">" symbol, or a possible XHTML closure, which makes use of the slash before it: (/>,>). The slash is, of course, escaped since it coincides with the regular
