## Overview

---

As of 2024, Finland is actively pursuing a transition to increase renewable energy's share to 50% of total energy consumption by 2030, aligning with European Union climate goals. Finland's Integrated Energy and Climate Plan Update includes national targets and the related policy measures to achieve the EU's energy and climate targets for 2030. The Energy and Climate Plan addresses all five dimensions of the EU Energy Union: decarbonisation, energy efficiency, energy. The key target in promoting renewable energy is to reduce greenhouse gas emissions and move away from the energy system that is based on fossil fuels. Use of renewable energy also improves our energy self-sufficiency and employment and supports the development of technologies in the sector. It is an ambitious, but achievable decarbonization journey which has the aim by the year 2035 to bring the Helsinki network to a zero local CO2 emission from its district heating. Finland has submitted an update of its National Energy and Climate Plan (NECP) to the European Commission on 28 June 2024. It outlines the impact of the confirmed policy.
