### Create new column based on values from other columns / apply a

For the examples below - in order to show multiple types of rules for the new column - we will assume a DataFrame with columns 'red', 'green' and 'blue', containing floating-point values ranging 0 to 1.

### Move the most recent commit (s) to a new branch with Git

A graphical version manager where you would just add a tag for the new branch without dealing with what seems to me obscure and archaic syntax would be such a relief. My kingdom and

### **How does the new operator work in JavaScript?**

The new operator uses the internal [] method, and it basically does the following: Initializes a new native object Sets the internal [] of this object, pointing to the Function prototype

### **When to use "new" and when not to, in C++?**

You should use new when you wish an object to remain in existence until you delete it. If you do

not use new then the object will be destroyed  
when it goes out of scope.
