

Outdoor solar power hub statistics

Overview

The latest update contains data on roughly 4.5 million individual systems installed through the end of 2024 and provides project-level data covering a wide range of system technical characteristics, installed prices, financing and installer level data, and customer segmentation. The latest update contains data on roughly 4.7 gigawatts direct current (GWdc) of capacity in Q3 2025, a 20% increase from Q3 2024, a 49% increase from Q2 2025, and the third largest quarter for deployment in the industry's history. Following a low second quarter, the industry is ramping up as the end of the year approaches. The solar market and industry continued to demonstrate resilience and record-setting performance throughout 2025, even as policy uncertainty, tariffs, supply chain shifts, and rising costs shaped sector dynamics. Utility-scale projects and manufacturing capacity surged, while residential adoption continued to grow. Berkeley Lab collects, cleans, and publishes project-level data on distributed* solar and distributed solar+storage systems in the United States. The data are compiled from a variety of sources, including utilities, state agencies, local permitting agencies, property assessors, and others. The IEA reported Pakistan's rapid rise to fourth place in annual global PV deployment in 2024, with 17 GWdc installed. IRENA reports significant cost declines for all. Solar photovoltaics is one of the most cost-effective technologies for electricity generation and therefore its use is growing rapidly across the globe.
