

PV inverter operation status information

Overview

A solar inverter display typically shows information about the current power output, total energy production, and any system errors or issues. Users can read this display by first identifying the various symbols and numbers, which represent different metrics of the solar system's. This article explains the status indicators MPP, MPP peak, MPP search and MPP tracking. MPP stands for maximum power point. The inverter operates in MPP mode and takes the highest possible power from the PV. Here's how to interpret the numbers on a typical solar inverter display. If the alarm/maintenance indicator is red, an internal fault on the DC side of the inverter was generated. The inverter is in grid-tied mode. Inverter: Inverter state, Power output, Frequency and AC Voltage Battery: Battery Power (charging shows positive number, discharging shows negative number), Current, DC voltage, Temperature (*), State-of-charge (*).
