[What does ** \(double star/asterisk\) and * \(star/asterisk\) do for_](#)

What does (double star) and (star) do for parameters? They allow for functions to be defined to accept and for users to pass any number of arguments, positional (*) and keyword (**).

[What is the difference between URL parameters and query strings_](#)

I don't see much of a difference between the parameters and the query strings, in the URL. So what is the difference and when should one be used over the other?
