

Photovoltaic energy storage charging and swapping station

Overview

Integrated PV-storage-charging-swapping stations, which integrate photovoltaic (PV) power generation, energy storage systems (ESS), EV charging, and battery swapping services, have emerged as a critical solution for optimizing urban energy infrastructure. Against the backdrop of global energy transition and the rapid popularization of electric vehicles (EVs), traditional single-function charging facilities can no longer meet the demands for efficient energy supply, low-carbon operation, and grid-friendly interaction. It proposes a dual-layer optimization scheduling model for PCSSIS clusters and distribution network systems.
