

Power energy storage coordination planning

Overview

This paper proposes an integrated hierarchical coordination framework for planning and operations to address the decoupling between long-term capacity planning and short-term operational scheduling in renewable energy systems and the resulting economic and reliability losses. 6% reduction in daily operating costs and a decrease in the comprehensive curtailment rate from 9.4%, thereby transforming energy storage. This study aims to minimize the overall cost of wind power, photovoltaic power, energy storage, and demand response in the distribution network.
