Power Station Construction

Power station construction refers to the process of designing and building facilities for generating electrical power, encompassing various types such as oil-fired, coal-fired, and nuclear power

In thermal power stations, mechanical power is produced by a heat engine that transforms thermal energy, often from combustion of a fuel, into rotational energy. Most thermal power stations produce steam, so they are sometimes called steam power stations. Not all thermal energy can be transformed into mechanical power, according to the second law of thermodynamics; therefore, there is always heat lost to the environment.
