

# Sodium metal can be used in solar glass

## Overview

---

Antimony compounds (antimony trioxide,  $Sb_2O_3$ , or sodium antimonate  $NaSbO_3$ ) are added to a batch, at the 0.1-1 wt% level, to increase light transmission in patterned solar glass. While float glass, commonly used in Europe, can be easily recycled within the EU due to its consistent composition, recycling imported patterned glass - through. The invention discloses a sodium pyroantimonate for photovoltaic glass and a preparation method thereof. Our solar glass products meet stringent international standards and certifications. Borosil has developed. It can originate from the glass used in solar modules, where soda-lime glass contains sodium carbonate ( $Na_2CO_3$ ) or sodium bicarbonate ( $NaHCO_3$ ) to lower the melting point of. Photovoltaic Glass Waste Recycling in the Development of Glass. It is highly reactive, which is why it is never found naturally as a free metal but rather bound in stable compounds like sodium chloride ( $NaCl$ ), commonly known as.
