

Solar panels in two colors

Overview

The short answer is: Yes, residential solar panels are available in a variety of colors. If those two colors don't fit with your personal aesthetic, or your HOA has certain rules about roof colors, the absence of options for colored solar panels might limit. The panels come in two different white color finishes: the full white option provides the best color appearance, while the white version enhances power generation capability. White solar panel solutions match well with buildings needing a contemporary appearance because they perfectly integrate. Outside of very niche applications where solar cells and panels can actually be tinted specific colors (usually with a significant hit to efficiency), solar panels typically come in three basic designs: white, black, and transparent (aka bifacial). Already for years on the market circulate.
