- ✓ EMS AND BMS

Overview

There are two basic approaches to connecting a grid-tied solar panel system, as shown in the wiring diagrams below. This guide explains the difference between load-side and supply-side solar interconnection in plain English, why panel limits matter, when installers choose each method, and what questions to ask before approving a design. Safety note (USA): This guide is for homeowner education, quote comparison. Here are design tips for methods of PV system utility interconnection. Supply-side interconnection connects before the main service disconnect and is not limited by the 120% rule, making it ideal for systems 15kW to 50kW.
