

**The MW of a solar power station refers to the amount of electricity generated per hour**

## Overview

---

Kilowatt-hour (kWh) : 1 kWh = 1000 Wh, commonly used to describe household or commercial electricity consumption, such as a household using an average of 10 kWh per day. A megawatt (MW) is a unit of power equal to: 1 MW = 1,000 kW = 1,000,000 W MW is used to describe instantaneous output for: Utility-scale solar power plants Wind farms and hybrid renewable systems Commercial & industrial energy storage systems (C&I ESS) Diesel-PV-storage hybrid microgrids. A megawatt solar is a unit of power equal to one million watts or 1,000 kilowatts (kW). In solar energy, 1 MW refers to the maximum potential output of a solar installation under ideal conditions. When someone says they have a 1 MW solar plant, it means that under peak sunlight, that plant can. In the context of solar panels, it represents the amount of electricity produced per unit of time. The standard unit of power is the watt (W), named after the Scottish engineer James Watt. For example, if you run a 1,000-watt appliance for one hour, it will consume 1 kWh of electricity.
