

# The future of solar power generation for home use

## The future of solar power generation for home use

---

### **std::future**

The class template `std::future` provides a mechanism to access the result of asynchronous operations: An asynchronous operation (created via `std::async`, `std::packaged_task`,

### **std::future::get**

The `get` member function waits (by calling `wait` ()) until the shared state is ready, then retrieves the value stored in the shared state (if any). Right after calling this function, `valid` () is false.

### [What is `\_\_future\_\_` in Python used for and how/when to use it, and](#)

A future statement is a directive to the compiler that a particular module should be compiled using syntax or semantics that will be available in a specified future release of Python. The

### **std::future::valid**

Checks if the future refers to a shared state. This is the case only for futures that were not default-constructed or moved from (i.e. returned by `std::promise::get_future` ()),

### [Cannot build CMake project because "Compatibility with CMake < 3.5"](#)

In this case it does work. In general, it probably

## **std::future::wait\_until**

wait\_until waits for a result to become available. It blocks until specified timeout\_time has been reached or the result becomes available, whichever comes first. The return value indicates why

## [Ansible yum throwing future feature annotations is not defined](#)

The error: SyntaxError: future feature annotations is not defined usually related to an old version of python, but my remote server has Python3.9 and to verify it - I also added it in my

## [Emerging Trends in Residential Solar](#)

doesn't. I'm wondering how this break in backwards compatibility should in general be navigated. Perhaps installing a previous version of

## [The Future of Residential Solar Energy: What's Next for](#)

In this article, we'll explore what defines a modern residential

## [Complete Guide To Fully Solar Powered Houses \(2025\) , Costs](#)

Everything you need to know about fully solar powered houses in 2025. Complete cost analysis, installation guide, real examples, and expert insights. Start your solar journey today.

## Power Systems for 2025 and

As the demand for sustainable energy solutions continues to rise, innovative technologies are playing a crucial role in shaping the future of residential solar power.

### **std::future::future**

2) Move constructor. Constructs a std::future with the shared state of other using move semantics. After construction, other.valid() == false.

### **std::promise**

The promise is the "push" end of the promise-future communication channel: the operation that stores a value in the shared state synchronizes-with (as defined in std::memory\_order)

### **Standard library header (C++11)**

```
future (const future &) = delete; ~future ();
future & operator =(const future &) = delete;
future & operator =(future &&) noexcept;
shared_future share () noexcept; // retrieving the value
```
