

# The quality level of photovoltaic panels is determined by class

## Overview

---

Solar panels are graded into categories A, B, C, and D based on their quality, and the cost differences between these grades can be significant. Grade A panels, for instance, are the highest quality, while Grade D panels are typically considered low-grade materials with limited. Learn how solar panels are graded (A, B, C, D), their applications, and why quality matters. Get insights to make informed decisions for your solar project. These grades are typically assigned during or after the panel manufacturing and testing process, particularly during electroluminescence (EL) testing. Let's break them down: These are. And once you've figured out what kind of solar panels, made of which material, you need to decide what grade to get. Understanding the grade of a.
