

Thin-film solar power generation and heating

Overview

This chapter aims to provide a comprehensive overview of thin films in solar technology, covering their historical development, types, fabrication techniques, performance characteristics, applications, market trends, and future prospects. A newly developed hybrid energy device demonstrates how combining solar and triboelectric technologies can unlock previously untapped environmental energy sources. In this article, we provide you with a deep review of this technology, the types of solar panels. Thin-film solar cells are a type of solar cell made by depositing one or more thin layers (thin films or TFs) of photovoltaic material onto a substrate, such as glass, plastic or metal.
