

Triode solar power generation

Overview

This study proposes and investigates a novel solar power tower-based tri-generation system producing electricity, hydrogen, and green ammonia through integrated thermodynamic cycles. A 5 kW power triode used in radio transmitters. A triode is an electronic amplifying vacuum tube (or thermionic valve in British English) consisting of three electrodes of different kinds of photovoltaic materials. Some of the most commonly used materials include mono and polycrystalline silicon, Cadmium telluride (CdTe), Gallium arsenide (GaAs) as well as triple-junction solar cells composed of Indium gallium phosphide (InGaP). Research groups use a variety of processes to fabricate thin-film CdS/CdTe cells, including physical vapor deposition, chemical vapor deposition, and RF diode sputtering. One of the central areas of investigation concerning
