

Trough solar thermal power generation technology

Overview

The parabolic trough solar collector (PTC) is one of the most proven and efficient solar thermal technologies for medium- to high-temperature applications. Using a precisely curved mirror to focus sunlight onto a receiver tube, it converts solar radiation into usable heat energy. In most. With its ability to provide high-efficiency heat for industrial processes at temperatures ranging from 150 °C to over 500 °C, solar thermal power generation offers significant potential for decarbonizing energy-intensive industries.
