

Uzbekistan communication base station grid-connected solar power generation parameters

Overview

Operation parameters and characteristics of the PPS and parameters at the output of the network inverter are given. Suitable for printing. In the Navoi region, a solar photovoltaic station with a capacity of 100 MW was integrated into the grid. Solar panels generate electricity under sunlight, and through charge controllers and inverters, they supply power to the equipment of communication. The Uzbekistan Power energy system is territorially divided into 5 parts: the Central part (Tashkent city, Tashkent, Syrdarya, and Jizzakh regions), the Eastern part (Fergana, Namangan, and Andijan regions), the SouthWestern part (Kashkadarya, Samarkand, - Bukhara, and Navoi regions), the Southern. Photovoltaic power station (PPS) operating function (without redundancy) with a nominal capacity of 10 kW connected to the low voltage electrical network established by "Zhejiang Chint Electrics Co Ltd" (PRC) under Tashkent conditions is defined.
