

# Vanadium batteries used in Cameroon energy storage power station

## Overview

---

Energy storage systems are used to regulate this power supply, and Vanadium redox flow batteries (VRFBs) have been proposed as one such method to support grid integration. Image Credit: luchschenF/Shutterstock. com VRFBs include an electrolyte, membrane, bipolar plate, collector plate. Recently, the world's largest 100MW/400MWh vanadium redox flow battery energy storage power station has completed the main project construction and entered the single module commissioning stage. The battery uses vanadium's ability to exist in a solution in four different to make a battery with a single electroactive element. This work is a product of the staf of The World Bank with external contributions. The construction process of these stations involves pre-project inspection.
