

What does DG stand for in microgrid

Overview

Distributed Generation (DG) refers to the generation of electricity from various small-scale sources of energy such as solar panels, wind turbines, or micro-turbines, located near the consumers. Key features of DG: Capacity is usually small (from a few kW up to a few MW). Often. Meaning → Managing decentralized power sources for grid stability & sustainability. In present scenario, the importance of distribution sources is very high for maintaining the system reliability and also for.
