Micro inverters can be connected to the wireless router through the built-in Wi-Fi module, string inverters and energy storage inverters can be connected to the wireless router through the external Wi-Fi data collector, the Wi-Fi module or data collector will transmit the. Therefore, how should we choose the appropriate communication method when using an inverter?

1. 1 Communication methods When using the GPRS/4G communication method, each inverter needs to be equipped with a data collector with a GPRS/4G communication module. The data is transmitted over power lines, aggregated into data collectors, and transmitted over the network to the inverter company's servers. For instance, RS485 can handle communications over distances up to 1200 meters. At present, the communication mode of inverter is highly digital, intelligent and networked, which effectively supports the coordinated operation of massive dispersed objects and the precise decision of the complex operation state of the system under various market mechanisms, and promotes the. Therefore, when using the inverter, how should we choose the appropriate communication method?
